#### **EXCLUSIVE LIVE WEBINAR**

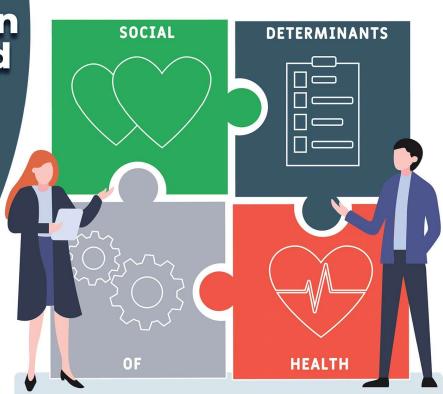

EARN 1.5 CEUs

Finding the Intersection Between Counseling, Communication, and Social Determinants of Health

#### PRESENTED BY

Kristen Hicks-Roof, PhD, RDN, LDN, CLC, FAND Kassie Terrell, PhD, LMHC, NCC

October 19, 2022 2-3:30 pm ET

### **Accreditation Statement**

In support of improving patient care, Great Valley Publishing Company is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME), the Accreditation Council for Pharmacy Education (ACPE), and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team.

This activity awards credit for dietitians (CDR CPEU).

### Disclosures

- Kristen Hicks-Roof PhD, RDN, LDN, CLC, FAND, faculty for this event, has no relevant financial relationship(s) with ineligible companies to disclose.
- Kassie R. Terrell, PhD, LMHC, NCC, CCIS-II, faculty for this event, has no relevant financial relationship(s) with ineligible companies to disclose.
- None of the planners for this educational activity have relevant financial relationship(s) with ineligible companies to disclose.
- An "ineligible company" includes any entity whose primary business is producing, marketing, selling, re-selling, or distributing healthcare products use by or on patients.

## Learning Objectives

- 1. Define social determinants of health (SDOH) and explain their impact on the management of personal health.
- 2. Recognize and use screening tools that can identify SDOH and help care givers and patients overcome barriers to good health practices.
- 3. Implement inclusive communication skills to improve equitable and personcentered practices.

## Social Determinants of Health

| Economic<br>Stability | Neighborhood<br>and Physical<br>Environment | Education  | Food                | Community and Social Context | Health Care<br>System  |
|-----------------------|---|--|---------------------|------------------------------|--|
| Employment<br>Income  | Housing<br>Transportation                   | Literacy<br>Language   | Hunger<br>Access to | Social<br>Integration        | Health<br>Coverage   |
| Expenses<br>Debt      | Safety<br>Parks                             | Early Childhood Education  Vocational Training  Higher Education | Healthy<br>Options  | Support System  Community    | Provider Availability  Provider Linguistic and Cultural Competency |
| Medical Bills Support | Playground<br>Walkability                   |  |                     | Engagement                   |  |
| 33,5011               | Zip code/<br>Geography                      |  |                     | Discrimination<br>Stress     |  |

#### **Health Outcomes**

Mortality, Morbidity, Life Expectancy, Health Care Expenditures, Heath Status, Functional Limitations

### **SOCIAL DETERMINANTS OF HEALTH**

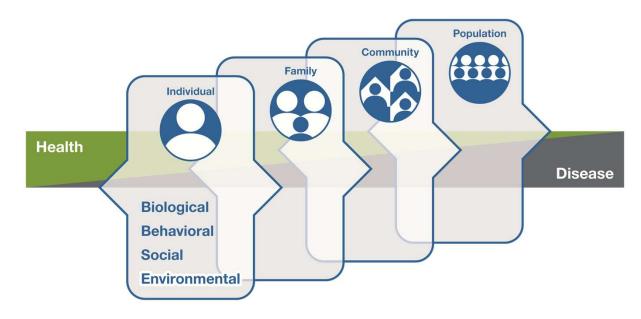

## Practical Applications 🚭

- Assess different systems that may impact your patient's health needs and/or ability to access care
  - Social factors, environmental, cultural, religious, economic
- Consider financial insecurity and seek to ask questions that may indicate if this is a concern
  - Care access, affordability, purchasing food/equipment/medications
- Be mindful of health literacy
  - Does your patient know what you are saying about/for their conditions?
- Create a list of resources for your patients and/or work with social workers

## The Whole Person Model

| Summarize  | Recognize  | Focus  |  |
|--|--|--|--|
| Summarize SDOH and their impact on one's ability to manage personal health and broader health implications | Recognize SDOH screening tools to use in health-related fields | Focus on priority needs and how SDOH influence/impact plan of care |  |

Accelerating Nutrition and Health **Equity:** Systems Approach

Health and disease are interconnected in multiple ways

- Biological
- Behavioral
- Social
- Environmental

## **Patty**

Patty has type 2 diabetes, which has been uncontrolled for over 10 years. She has low health literacy and doesn't understand how to control DM. DM has progressed resulting in nephropathy, neuropathy, and inability to do physical labor work due to countless medical appointments and pain.

## **Common Screening Tools**

\*NACHC's Protocol for Responding to and Assessing Patient's Assets, Risks, and Experiences Tool (PRAPARE)

\*\*AAFP's The EveryONE Project's Social Needs Screening Tool \*\*\*CMS's Health-Related Social Needs Screening Tool (AHS-HRSN)

HealthBegins Tool

AccessHealth Screening Tool

Virginia Commonwealth Social Needs Assessment

<sup>\*</sup>National Association of Community Health Centers

<sup>\*\*</sup>American Academy of Family Physicians

<sup>\*\*\*</sup>Center for Medicare & Medicaid Services

## SDOH - Where do Screenings Occur?

Screening tools and screening research to address each construct of the SDOH are limited

| Distribution of Studies                 |  |       |    |       |  |  |
|---|--|-------|----|-------|--|--|
| Social Determinant                      | Frequency of Studies, n (%) Number of Screening Tools, n (%) |       |    |       |  |  |
| Poverty                                 | 0  | 0.0%  | 0  | 0.0%  |  |  |
| Employment                              | 0  | 0.0%  | 0  | 0.1%  |  |  |
| Food Insecurity                         | 5  | 0.0%  | 8  | 21.1% |  |  |
| Housing                                 | 3  | 11.6% | 1  | 2.6%  |  |  |
| Transportation                          | 0  | 7.0%  | 0  | 0.0%  |  |  |
| Health Literacy                         | 16   | 0.0%  | 12 | 31.6% |  |  |
| Trauma Exposure/History                 |  | 37.2% | 6  | 15.8% |  |  |
| Social Support                          |  | 18.6% | 7  | 18.4% |  |  |
| Multi-Social Determinant Screening Tool | 4  | 9.3%  | 4  | 10.5% |  |  |
| Total:                                  | 43 Studies 38 Screening Tools                                |       |    |       |  |  |

Note: Employment Poverty, and Transportation were each assessed for at least once within the four multi-social determinant screening tools used.

## Why Interprofessional Teams are Crucial

- SDOH screening across the professions
- Highlight issues related to plan of care
- Provider-Provider communication

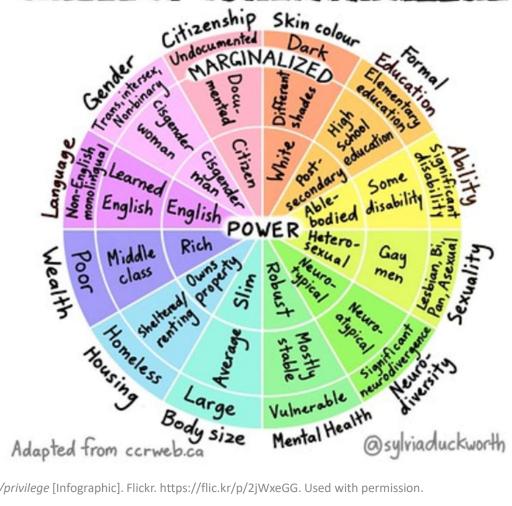

## Role Play Round 1 + Breakout

## Courageous Conversations

#### **Community Guidelines**

#### We will:

- · Create a Brave Space where we can learn, share, and grow
- Listen to understand, not respond
- Grow through our discomfort
- Keep content confidential, while carrying out lessons learned
- Recognize and rephrase statements that are microaggressions

#### What are microaggressions?

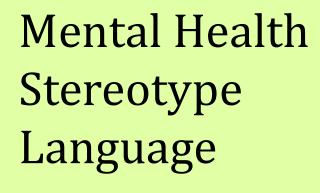

**Microaggressions** are brief and commonplace indignities that communicate hostile, derogatory, or negative slights and insults to a nondominant group (i.e. racial, gender, sexual orientation, religious minority)

- Often not intended to be harmful
- Usually communicate larger social message that are offensive
- Gain power from cumulative effect

## Mental Health Stereotypes

Addressing language that creates stereotypes around mental health symptomatology

#### **ADHA**

• "I'm so ADHA" "OMG" "Squirrel"

#### **Autism Spectrum Disorder**

"You don't seem autistic"

#### Bipolar Disorder

• "I'm so bipolar!" "I'm o manic!"

#### Post Traumatic Stress Disorder

• "OMG, I have PTSD from that"

#### **Eating Disorders**

"Doesn't everyone have one these days?"

#### <u>Schizophrenia Spectrum & other</u> Psychotic Disorders

"Crazy, Psychopath"
 Obsessive Compulsive Disorder

 "I'm so OCD!" "We're all a little OCD"

#### **Depressive Disorder**

- "Stop being so depressing"
- "What do you have to be sad about?"
- "Well, this is depressing" "Just think positively"

#### **Anxiety Disorders**

- "Just calm down"
- "There's nothing to be anxious about"

#### Personality Disorder

• "Psychopath; Sociopath"

#### **Dissociative Identity Disorder**

- "That's just my other personality"
- "I'm such a Gemini, I have so many personalities"

# Importance of Avoiding Mental Health Stereotypes

#### Stereotypes can:

- invalidate people's experiences
- minimize people's challenges and struggles
- create stigma around mental health disorder
- lead to discrimination and impaired access to resources
- Do not perpetuate common stereotypes that individuals with mental health disorders are all the same, crazy, incompetent, weak, dangerous, faking, or making excuses.
- What might feel like a harmless joke to you can perpetuate devastating challenges for others.

## Mental Health Stereotyping Language

#### **Autism Spectrum Disorder**

"You don't seem autistic."

#### Bipolar Disorder

"They're so bipolar!" "I'm so manic!"

#### Post-Traumatic Stress Disorder

"OMG, I have PTSD from that."

#### Personability & Psychotic Disorders

"Crazy, Psychopath, Sociopath"

#### **Obsessive Compulsive Disorder**

"I'm so OCD!" "We're all a little OCD."

#### Dissociative Identity Disorder

"I'm such a Gemini, I have so many personalities."

Do

- Educate yourself and others
- Be mindful of your words
- Reflect on whether your thoughts, words, and behaviors are a result of stereotypes

Don't

- Speak without thinking of the impact it will have on others (intent verses impact)
- Entertain stereotypical thoughts, behaviors, words from others
- Ex: Making or laughing at insensitive and inaccurate jokes about mental health

## Key Takeaways

- The impact from using stereotypes around mental disorders is strong. What might feel like a harmless joke to you can actually perpetuate devastating challenges for others
- Be mindful of you stereotypes around mental health so you do not perpetuate common myths and misconceptions that individuals with mental health disorders are all the same, crazy, incompetent, weak, dangerous, faking, or making excuses

## **Disability Etiquette**

Addressing language and misconceptions around disabilities

## Disability Myths & Stereotypes

Myth: People with disabilities are inspiring or courageous.

**Truth:** It can be condescending, infantilizing, and presumptuous to call someone brave or inspiring just because they live with a disability.

**Myth:** You should always say "different ability" rather than "disability."

**Truth:** Many people in disability communities have spoken out that the term "differently abled" can feel dismissive of their experiences.

**Myth:** There is nothing one person can do to help eliminate the barriers confronting people with disabilities.

**Truth:** Everyone can contribute to change by:

- speaking up when negative language is used about disability
- advocating for barrier-free environments

# Importance of Avoiding Disability Stereotypes

**Who:** Everyone who is, works with, talks to/about, is friends with, is family of, etc. a person with a disability should know disability etiquette.

When: Always!

<u>up for someone and speaking over someone.</u> Always be sure to listen and learn when a person is sharing their perspective or experience.

## Disability Inclusive Language

Instead of: "Disabled people"

Try: "People with disabilities"

**Instead of:** "They are a cerebral palsy victim"

**Try:** "The have cerebral palsy"

**Instead of:** "They are wheelchair bound"

**Try:** "They use a wheelchair"

**Instead of:** "They suffer from autism"

Try: "They have autism"

Do

- Use person-first language in professional settings and writing
- Always use the language that people use for themselves and/or the labels and identifiers that they ask you to use

Don't

- Assume everyone prefers either person-first or identity-first language
- Assume you can tell who has a disability by looking at them

## Key Takeaways

- Always use the language that people use for themselves and/or the labels and identifiers that they ask you to use.
- While some individuals with disabilities prefer to use identity-first language, proper disability etiquette is to use person first-language when referring to a person with disability unless they use identity-first language for themselves and indicate that you should do so for them as well.
- It is important to use person-first language in professional settings and writing.

## **Expanding Beyond the Gender Binary**

Using inclusive and affirming language

## Gender Myths & Stereotypes

Myth: Identifying as gender variant is a phase.

**Truth:** No one chooses to be transgender or nonbinary. It is just who they are.

Myth: Gender identity can be "cured."

**Truth:** Conversion or reparative therapy is unethical and does

not work.

Myth: Those who are gender variant are mentally ill.

**Truth:** Although those who are gender variant do have a greater chance of experiencing depression and suicidal thoughts, simply being gender variant does not mean a person is mentally ill.

Remember: There is a difference between sex, gender identity, gender expression, and sexual orientation.

# Importance of Avoiding Gender Stereotypes

- More than a million nonbinary individuals and 1.4 million transgender individuals live in the US.
- Transgender and non-binary people face numerous health disparities, stigma, discrimination, and lack of access to quality care.
- Gender affirming care decreases suicide attempts, substance use, and the use of unsafe interventions to transition.

## Gender Inclusive & Affirming Language

#### Do

- Introduce yourself with your name and pronouns
- Ask in what situations you can use someone's pronouns and name
- Correct yourself if you use the wrong name or pronouns
- Use gender neutral language until you are sure of someone's pronouns

#### Don't

- Assume someone's gender identity based on their gender expression or the sex they were assigned at birth
- Use someone's deadname
- Ask about a person's reproductive organs
- Believe or follow stereotypes

## Key Takeaways

- More than a million non binary individuals and 1.4 million transgender individuals like in the US
- Gender affirming care is clinically sound and the most effective way to alleviate symptoms of gender dysphoria, which can cause serious mental distress, anxiety, and depression when untreated
- Gender affirming care decreases suicide attempts, using unsafe interventions to transition, and substance use. Gender affirming care increases the likelihood of engaging in HIV prevention and medical adherence

## Weight Inclusivity

Being mindful of language and attitudes towards all bodies

## Weight Myths & Stereotypes

Myth: BMI is a useful measurement of health.

**Truth:** BMI is an outdated and inaccurate measure of health.

Myth: Skinny people are active and fat people are lazy.

**Truth:** People can be healthy AND unhealthy no matter their

weight.

**Myth:** Dieting is an important and helpful part of weight maintenance.

**Truth:** Weight cycling through dieting compromises physical and psychological health.

**Myth:** Body weight always co-occurs with other mental and physical conditions.

**Truth:** Body weight is not a sole causal determinant of other health conditions.

# Importance of Avoiding Weight Stereotypes

- It is vital we are mindful of our language and attitudes toward all bodies.
- People of all sizes are deserving of equal access to education, treatment, and places.
- Using weight inclusive language will make those around you feel more comfortable and lead to better outcomes.
- Approaching our work from a weight inclusive lens will make the world a more equitable and safer place.

## Weight Inclusive & Affirming Language

### Do

- Be honest with your own biases around size diverse people
- Advocate for fat people in your life to ensure they get the care they need
- Educate yourself on size diversity and the discrimination folks face living in a larger body
- If you recommend exercising, ensure you are doing so for the mental benefit and not the physical one, and you are prescribing it to all sized clients

## Don't

- Complement weight loss or make comments on someone's body, unless someone has invited a conversation to do so
- Use language like obese or overweight
- Make jokes about what you are eating or monitor what people in large bodies are eating
- Tell someone they are "brave" for simply existing in their body

## Key Takeaways

People of all sizes are deserving of equal access to education, treatment, and places. Approaching our work from a size inclusive lens will only make the world a more equitable and safer place

## Inclusive, Equitable, & Person-Centered Practice

#### **Reflective Practice**

 Commit to personal awareness and become aware of your automatic reactions and prejudices

#### Establish Relationship

 Non-judgmental, validate feelings, normalize experience, be mindful of nonverbal behaviors

## Roadblocks for Communication

 Ordering, threatening, lecturing, judging, criticizing, blaming, shaming, analyzing, interrogating

#### **Opening Skills**

- Active listening, nonverbals and facial expressions, attentive silence, voice tone
- Use minimal encouragers, ask client to share more, avoid why questions and rely on open questions (vs closed questions)

## Inclusive, Equitable, & Person-Centered Practice

#### **Reflecting Content**

- Confirm or correct what client is sharing
- Stimulate further exploration of client's experience
- Capture relevant aspects of client's message

#### **Reflecting Feelings**

- Express understanding of client emotions
- Leads to deeper level disclosures and helps client untangle emotional knots
- Normalizes emotions and deepens relationship
- Try: You feel\_\_\_\_ when or because

#### Summarizing

 Helps client stay on track, directs client to move to next topic, helps identify themes, review progress, bring closure to session

#### **Challenging Skills**

- Confront misinformation or inconsistent thoughts, feelings, behaviors
- Challenge must be coupled with support and is not shaming or blaming
- Offer tentatively, use in small doses, emphasize strengths
- Try: On the one hand \_\_\_\_\_, on the other hand

\_\_\_\_\_

## Role Play Round 2 + Breakout

- 1 Have Courageous Conversations
- 2 Avoid Stereotypes
- Use Inclusive and Affirming Language
- Create an Inclusive, Equitable, & Person-Centered Practice
